IDEATION PHASE

EV Market Analysis Dashboard using Tableau Public

Dataset-based Empathy Map, Problem Statements, Brainstorming & Idea Prioritization

Dataset snapshot: 200,000 rows × 37 columns. The dataset contains EV specifications, sales, pricing, battery information, ratings, manufacturing geography, and recommended use cases.

DEFINE THE PROBLEM STATEMENTS

Project Details	Information
Date	18 October 2026
Team ID	To be filled by team
Project Name	EV Market Analysis Dashboard using Tableau Public
Primary Users	EV market strategy director, automotive business intelligence manager, sustainable mobility researcher, students and project reviewers
Purpose	Understand what users need to compare EV market sales and vehicle specifications clearly.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	I am an EV market strategy analyst.	compare recorded annual sales across manufacturers, categories and model years.	the information is spread across many rows and fields, making comparisons slow.	I do not have one clear interactive view of annual_sales_units, manufacturer, category and model_year.	less confident about identifying the strongest recorded segments and explaining market patterns.
PS-2	I am an automotive business intelligence manager.	compare battery technology, driving range, price and customer ratings.	it is difficult to review these measures together using raw tables.	the dataset contains many specifications, and inconsistent aggregations or missing values can affect interpretation.	concerned that important comparisons may be missed or misinterpreted.
PS-3	I am a student or sustainable mobility researcher.	summarize differences by manufacturing country, market region and recommended use case.	I need to manually sort and compare many records to find useful patterns.	the raw dataset does not immediately show relationships between geographic, technical and sales fields.	overwhelmed and in need of clear, evidence-based visual summaries.
