IDEATION PHASE

EV Market Analysis Dashboard using Tableau Public

Dataset-based Empathy Map, Problem Statements, Brainstorming & Idea Prioritization

Dataset snapshot: 200,000 rows × 37 columns. The dataset contains EV specifications, sales, pricing, battery information, ratings, manufacturing geography, and recommended use cases.

EMPATHY MAP CANVAS (4 Marks)

Project Details	Information
Date	18 October 2026
Team ID	Roll 58
Project Name	EV Market Analysis Dashboard using Tableau Public
Primary Users	EV market strategy director, automotive business intelligence manager, sustainable mobility researcher, students and project reviewers
Purpose	Understand what users need to compare EV market sales and vehicle specifications clearly.

Empathy Area	User Observations / Needs
SAYS	“I need to compare annual sales across manufacturers and categories.” “I want to understand how battery type, range, price and ratings differ.” “I need charts that make the data easy to explain.”
THINKS	Which manufacturers have the highest recorded annual_sales_units? Which categories and battery types are common? Is price_usd associated with range_km? Which countries and market regions appear in the dataset?
DOES	Reviews vehicle records; compares manufacturers, model years, categories, battery types, range, price, customer ratings and annual sales; uses filters and charts to investigate patterns.
FEELS	May feel overwhelmed by 37 columns and a large dataset; may be unsure which comparisons are most useful; needs confidence that calculations and chart labels are consistent.
PAINS / CHALLENGES	Large number of records and dimensions; possible missing or unusual values; measures may be misleading if aggregation is unclear; the dataset may not represent the entire EV market.
GAINS / NEEDS	A single interactive dashboard; KPI cards and focused charts; filters for manufacturer, category, battery type, market region and model year; clear tooltips, consistent aggregations and an insights summary.

Design implication: Build a Tableau Public dashboard with KPIs, manufacturer/category sales, battery distribution, range and price comparisons, ratings, manufacturing-country/region views and model-year analysis. Clearly state that findings describe the supplied dataset, not necessarily the entire global EV market.
