Project Design Phase-II
Technology Stack (Architecture & Stack)

Date	19 October 2026
Team ID	Roll 58
Project Name	EV Market Analysis Dashboard using Tableau Public
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the technologies, platforms, databases, BI tools, and integrations that you will use to build your Business Intelligence solution. A well-chosen technology stack helps ensure that the solution is scalable, maintainable, secure, and suitable for data analysis and reporting requirements.

S.No	Component	Description	Technology	Justification / Purpose
1.	Programming / Query Language	Language used to query, filter, transform, aggregate, and analyze data.	Tableau calculated fields; optional Excel formulas	Create calculated fields, aggregate measures, and support analysis without requiring advanced coding.
2.	Database / Data Warehouse	Storage for structured data used in analysis and reporting.	Excel workbook / CSV source file	The supplied EV dataset is stored in Excel format and can be connected directly to Tableau Public.
3.	Data Ingestion	Load source data into the analytical environment.	Tableau Public Excel data connection	Imports the supplied EV market dataset into Tableau worksheets.
4.	Data Transformation and Business Logic	Clean, filter, aggregate, and calculate metrics.	Tableau data source page, filters, groups, calculated fields	Supports null checks, field type validation, sales aggregation, average range, average rating, and distinct model counts.
5.	Data Visualization / Analytics	Create charts, reports, KPIs, and interactive analysis.	Tableau Public worksheets and dashboards	Builds eight visuals covering sales, category, battery, range, price, ratings, country, and model year.
6.	Front-End / User Interface	Interface for users to interact with visual insights.	Tableau Public interactive dashboard	Provides filters and chart interactions for market strategy, BI, and research users.
